## Tasmota TCP Dongle 模式

打开 WIFI 配网, 找到下面 AP 热点, 连上, 没有密码

在 WEB 网页上输入 192.168.4.1

找到网关 IP 地址,然后登录,默认 是 MQTT 模式,进入 Configuration

找到 Config Model,选择第二个 ZB2MQ TCP dongle 模式,保存

通过日志可以看到 TCP 的端口 是 6638。

然后进入 HomeAssistant 系统,输入网关 IP 和端口,然后重新插件,就可以正常使用

使用域名方式访问 zigbee2mqtt

## **ZB**bridge
